Dear Tina,

I wanted to let you know how pleased we are with your Step Ahead and PPAP Creator software.

Our CMM department is thrilled with how easy it was to learn, create new programs and edit existing programs with the software. Prior to using Step Ahead, one of the biggest complaints within the department is that there was no easy or quick way to look at the measurement data throughout a run; to be able to identify a bad CMM hit, or to see that perhaps a part wasn't seated properly on the gauge when the program was run.

With other software that we have used in the past, we would end up with a cloud of data that would take a lot of time to sort through to see if there were any bad hits or non conformances. With Step Ahead, it is extremely easy to quickly identify any abnormalities within a run with a quick look at the Reject/OK columns. The time necessary to become comfortable and adept with using the program was minimal. Just a couple of hours, and the outputs were very easy for our customers to understand.

The PPAP Creator software has reduced the time for our Advance Quality Engineers to prepare a report for our customers, virtually from days to hours. It is extremely easy to edit and the finished report that is sent to the Customer is professional, concise and up to date with current A.I.A.G form standards. To be able to include the correct GD&T nomenclature in the report is outstanding.

Our Quality Manager was so impressed with the time savings and results, that he has made a suggestion that we use both products in all of the plants within our Division.

It has been a pleasure working with you and your team Tina, and I look forward to future upgrades and improvements with both products.

Warmest regards,

Tim Atkinson
